CIRCULAR

ADVISORY FOR CONTROL AND PREVENTION OF VECTOR BORNE DISEASES

Dear Parents ,
Greetings!

As we continue to work together to provide a safe and healthy environment for our students, I would like to bring your attention to the increasing spread of Vector-borne diseases mainly Malaria, Dengue, Chikungunya and many more accounting for more than 17% of all infectious diseases, causing more than 700 000 deaths annually worldwide (as per WHO).

As we are very much concerned for our students the preventive measures and control methods taken by our school include:

- ❖ Fumigation of classrooms and open spaces.
- ❖ Taking preventive measure to ensure that there is no stagnant water in and around the school premises

We request you to kindly encourage your ward to wear full sleeved clothes that cover arms and legs to prevent mosquito bites and also use a good mosquito repellent if necessary.

Symptoms to watch out for:

- Fever
- Headache
- Joint pain
- Rashes
- Nausea and vomiting

Consult a doctor immediately in case any of the given symptom/s is/are observed and take medication as prescribed by a doctor

We urge you to take these precautions seriously and work with us to prevent vector-borne diseases.

Thank you for your cooperation and support

Warm Regards

Rashmi Raj Biswal
Principal
